

SL-2036-T

SL-2024-T

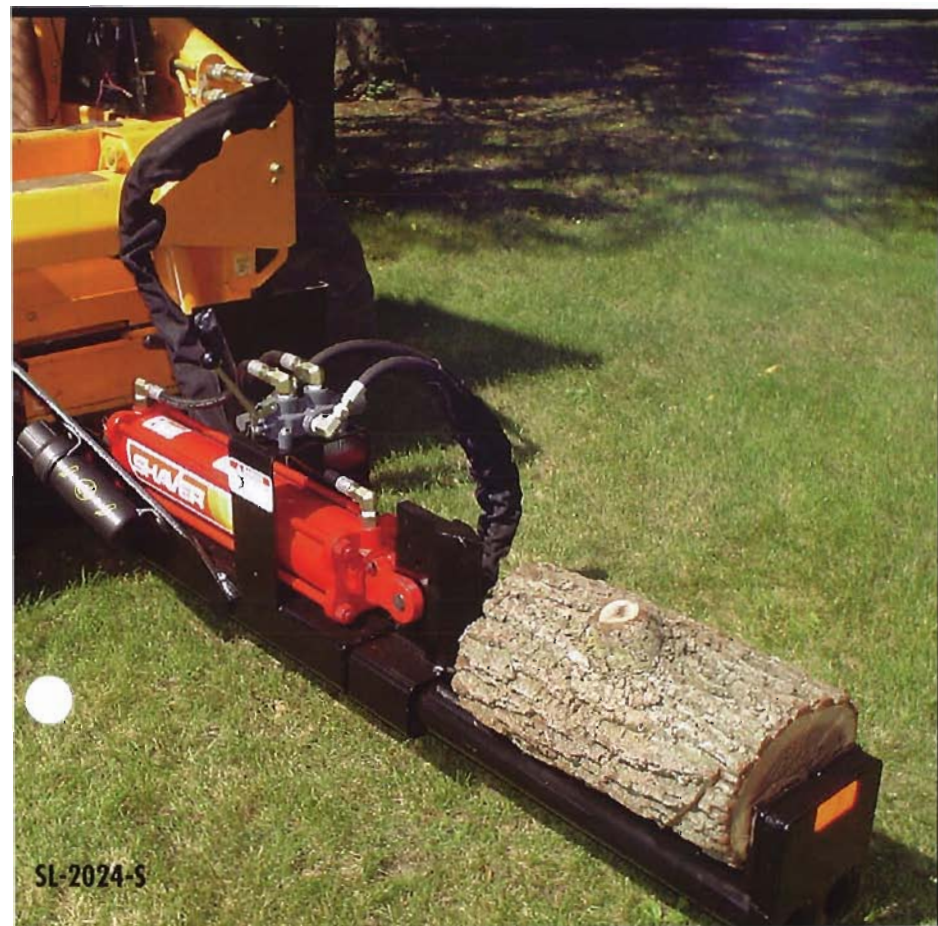

#### SL-2024-T

Powered by compact tractor, this 3-point mounted log splitter is ideal for rental and farm operations with minimum 2000 psi and a Cat I or II hitch. It splits logs up to 24-inches in length.

#### SL-2036-T

Similar to the 2024-T, the SL-2036 is a new member of the SL-Series. A heavy-duty cylinder allows you to split logs up to 36-inches long.

## INTRODUCING THE PROFESSIONAL DUTY SL-SERIES LOG SPLITTERS FROM SHAPER.

SL-2024-S

#### SL-2024-S

Skid steer loader log splitter. Split or quarter logs quickly – at either ground or waist level. It can easily slice through logs up to 24-inches in length.

#### SL 2036-S

The newest skid steer loader-mounted log splitter is also the largest. It features all of the power and splitting capability of the SL-2036-T – with the added maneuverability you get from a skid steer loader.

SL-2036-S

# THE PROS CHOOSE SHAVER

With more than 60 years of manufacturing experience, Shaver has been a leading innovator of fencing, stump cutting and log splitting equipment. The new lineup of SL-Series log splitters continues that tradition by adding two bigger units to an industry-leading lineup.

The new SL-2036-S features a universal bracket that makes it easy to mount to nearly any skid steer loader. That means you get the same powerful cutting ability of the SL-2036-T, but with the added maneuverability of a skid steer loader.

The new tractor mounted SL-2036-T makes quick work of logs up to 36-inches long – with the flexibility of splitting or quartering with one pull of the lever. Large, odd-shaped logs are no match either, with the SL-2036-T's ability to split from two different configurations – horizontal waist-level or horizontal ground level.

## QUICK HOOKUP. EASY OPERATION.

Built for long days of operation, Shaver SL Series log splitters are easy to hook up. A universal bracket on both the SL-2024-S and SL-2036-S make it easy to attach to most any skid steer loader with nothing more than a wrench. The tractor-mounted SL-2024-T and 2036-T models are just as simple. Because the entire splitting operation is handled with the pull of a lever beside the machine, operating these log splitters is a simple one-person job.

## HANDLE EVEN THE BIG LOGS – WITH BACK-SAVING FLEXIBILITY.

Because all of the Shaver SL Series log splitters feature a horizontal splitting height adjustment, you can easily load and unload logs from waist level or ground level. That means you lessen the back-breaking work of moving logs – whether you're loading from the ground, a log pile or the back of a truck.

## LESS LABOR. LESS TIME. LESS FUEL.

Shaver's unique four-way blade cuts log splitting chores in half by letting you quarter the log in one split. That means you have more "fire-ready" logs in less time using less fuel, less labor and less wear on your log splitter and tractor or skid steer loader.

## A UNIQUE NEW PROFIT CENTER

With energy prices hovering at all-time highs, people are looking for more ways to affordably keep their homes, workshops and other applications warm. If you already have a tractor or skid steer loader, Shaver SL Series log splitters are a great way to add a new profit center to your rental, farm or contractor business.
